### Automotive Fuel Sensors

**Employer:** For client of Visionline Management Ltd  
**Address:** Bergen, Norway  
**Phone:** +49 40-600 385 3490  
**Website:** [www.vision-line.co.uk](http://www.vision-line.co.uk)  
**Contact Person:** Mr. David Saunders  
**Work Place:** Bergen, Norway

#### About the company:

Since our company was established in 1986, we have grown to become Europe's largest provider of quality fuel-tank sensors thanks to systematic innovation and an uncompromising focus on quality. Over the years we have gained a global reputation for providing the most reliable sensors in all of our markets. Production in 2011 will surpass one million units, while many of our earliest manufactured sensors are still in service.

Today, our market orientation is four fold: automotive, marine, agricultural and construction vehicles. For these segments, we supply many types of liquid level and temperature sensors. As supplier to many industries with stringent quality requirements, our company satisfies all relevant international standards. Our strategy is to seek continuous improvement of quality and reliability, surpassing any requirement by a wide margin.

We have an available position as a combined Mechanical Design Engineer and Customer Project Manager at our regional office North Europe based at our headquarter in Bergen, Norway. In this position you will be responsible for the mechanical product design within Service & Aftermarket and Marine (SAM) and management of customer projects within the same segment. You will report to Head of Engineering in Region North Europe.

#### Main responsibilities

- Take ownership and design high quality 2D and 3D mechanical design drawings
- Work closely with other team members to ensure design in accordance with customer specifications
- Participate in discussions with customers to understand the requirements
- Be co-responsible for Service & Aftermarket and Marine customer projects
- Understand customer requirements, define the project and deliver the project with the agreed scope, quality, cost and time
- Ensure compliance with our development process
- Make project plans and follow up with regular status reports towards customers
- Support the customers related to technical issues found during the project and communicate internally
- Provide input to the line organisation how it can improve its processes to work more efficient
- Provide input to product and system roadmaps
- Grasp future product and technical trends in customer projects

#### Requirements

- Degree within mechanical engineering (BSc or MSc)

- Extensive experience with CAD tools, preferable Catia V
- Min 4 years of mechanical engineering
- International experience
- Experience with PDM system is a benefit
- Fluent spoken and written English (English is the working language). Scandinavian language is a plus.
